

Ecological Training

Description:

This training is an overview of ecological documentation and coordination with an emphasis on the methods and techniques required for the completion of ecological documents for ODOT projects. This one-day training course will be based on ODOT's Ecological Manual.

Target Audience:

Consultants who are involved with the preparation of ecological documentation such as Principal Investigators, Project Directors, and Project Managers with direct involvement with scoping, executing, reporting, and approving waterway permit work are required to attend.

Firms may send other staff members such as Environmental Specialists, Planners, and other Ecological/Permits Professional; however they are not required to send all environmental staff to the training.

Prequalification:

This class is planned as a prequalification requirement for ODOT in 2005.

Scheduled training dates are not finalized - will be added to ODOT's OES Website as soon as they are determined.

To receive credit for this class, all attendees will need to successfully pass a test to be given at the end of the class. Anyone not passing the test will need to re-take the class.
